MILK PRODUCTION AND DAIRY PRODUCTS, 1963 1/

SUMMARY

United States production of milk in 1963 totaled 124.8 billion pounds, according to the Crop Reporting Board. The 1963 output was 1 percent less than the record 126.0 billion pounds produced in 1962. Production per cow averaged 7,545 pounds and was 2 percent more than the 7,391-pound-output in 1962. Milk cow numbers continued to decline in 1963. The annual average of 16,538 thousand was 3 percent less than the 1962 average of 17,050 thousand.

New production records were established in 1963 for ice cream, ice milk, Italian cheese, blue mold cheese, and creamed cottage cheese. Production of American cheese, Mellorine, and nonfat dry milk were the second largest of record. Creamery butter output totaled 1,401 million pounds, down 9 percent from 1962. Total cheese production in 1963 amounted to 1,628 million pounds, up 3 percent from a year earlier and the second largest production of record. American cheese production increased 3 percent and Swiss, brick and Munster each increased 4 percent. Italian cheese production was 6 percent larger and blue mold cheese output 16 percent more than a year earlier. Limburger cheese was off 9 percent, cream was down 6 percent, and Neufchatel cheese dropped 33 percent. Creamed cottage cheese production increased 1 percent to a record high level. Ice cream output rose 3 percent, while ice milk production gained 4 percent and each set a new record high level. Milk sherbet production exceeded that of 1962 by 4 percent and was the fourth highest of record. Mellorine production was off 1 percent from the record high 1962 level. Evaporated whole milk production decreased 3 percent from a year earlier. This is the eighth straight year that output has declined. Canned sweetened condensed whole milk production increased 8 percent and was the largest volume since 1949. Production of nonfat dry milk for human food dropped 4 percent from the record high 1962 level. Dry buttermilk output was up 1 percent, but dry whole milk production was practically unchanged from 1962.

Dealers' buying prices for fluid-use milk during 1963 averaged \$5.31 per cwt. 4 cents lower than in 1962. The average price for the most common grade of whole milk delivered to homes in 25 cities during 1963 was 27.1 cents per single quart, two-tenths of a cent above the 1962 average. Prices for the most common grade of milk sold out of stores in half-gallon containers in the 25 cities averaged 45.8 cents during 1963, up two-tenths of a cent from 1962. Preliminary annual sales of whole milk in 81 marketing areas (7 State and 74 Federal) during 1963 were 2 percent higher than in 1962. In 80 of these areas, skim milk sales rose 9 percent. Sales of milk and cream mixtures (half-and-half) in 75 of these areas decreased 2 percent. In 76 areas, sales of other cream products totaled 2 percent under the previous year. The estimated milk equivalent of all fluid sales in 76 areas was about $2\frac{1}{2}$ percent above 1962. Receipts of milk from producers during 1963 in 86 marketing areas were 2 percent more than in 1962, and receipts per producer were up 8 percent.

Cold storage holdings of butter averaged 328 million pounds per month in 1963, compared with 363 million the year before. Butter holdings reached a peak for the year of 401 million pounds on July 1, but were 68 million pounds below the 1962 peak on August 1. Government holdings of butter on July 1 were 354 million pounds leaving 47 million in commercial channels. American cheese stocks in 1963 were below 1962, averaging 345 million pounds during the year, compared with 420 million in 1962. Warehouse stocks of fluid cream were down from the 1962 average monthly stocks of 8 million pounds to 7 million in 1963. On July 1, the usual time of maximum supply, fluid cream holdings were 11 million pounds, a record low for the date. Plastic cream supplies for 1963 averaged less than 1 million pounds. Refrigerated holdings of evaporated and condensed milk (bulk and case goods) averaged about 8 million pounds per month in 1963, compared with 10 million during 1962.

1/ This report was prepared in the Dairy Statistics Branch under the direction of I. E. Wissinger, Chief, and agricultural statisticians W. D. Bormuth, G. G. Butler, L. W. Haynes, L. W. Wallin, and M. R. Banks.

MILK COWS AND MILK PRODUCTION, 1963

Milk production in the United States in 1963 totaled 124.8 billion pounds, 1 percent less than the 1962 record production of 126.0 billion pounds. These are revised estimates based on the annual review of all available production and utilization check data. Annual average production per cow in 1963 was 7,545 pounds, 2 percent more than the 7,391 pound average in 1962. The number of milk cows in the United States averaged 16,538 thousand during 1963, which was 3 percent less than the 1962 average of 17,050 thousand. Milk production in 1963 was equivalent to 659 pounds per person, which was 16 pounds less than the 675 pounds produced a year earlier. For the first time, estimates are published by months for all 50 States; also current monthly estimates for all States will be published in the future.

Milk production in 1963 declined rather generally across the Nation from the levels of 1962. Except for the North Atlantic, milk production dropped off in all regions. By States, 1963 production declined from 1962 in 34, increased in 15, and was unchanged in 1. Wisconsin, New York, Minnesota, California, and Pennsylvania, in the order listed, were the leading milk-producing States. These 5 States accounted for 44 percent of the U. S. total in 1963. U. S. production was less than the corresponding month a year earlier throughout all of 1963. Although the average decline for the year was 1 percent, production was more than 1 percent below the previous year in the first and fourth quarters. Largest monthly reductions were 1.9 percent for February and 2.1 for October.

The annual rate of milk production per cow has increased each year since 1944. The 1963 annual rate of 7,545 pounds was 2.1 percent above 1962 and 1962 was 2.3 percent above 1961. Production rates increased from 1962 to 1963 in all regions, with rates up substantially in the North Atlantic. California, with an annual average production per cow of 10,410 pounds, led all States, followed by Arizona, New Jersey, Connecticut, and Massachusetts.

In 1963, the number of milk cows in June was down 3.0 percent from a year earlier and the December number was off 3.3 percent from the previous December. The annual average for 1963 was 16,538 thousand cows, or 3 percent less than in 1962. The 1962 average of 17,050 thousand was down 1.8 percent from 1961. In 1963, the annual average number of milk cows declined in all regions. Wisconsin's annual average of 2,127 thousand milk cows led all States, followed by Minnesota, New York, Pennsylvania, and California.

Estimated milk cows and heifers 2 years old and older in the United States totaled 18,073 thousand on January 1, 1964. The January 1 number was down 3 percent from the same date last year, was the tenth consecutive year of decrease, and was the smallest January 1 number since 1905. Estimates shown by States on page 6 include heifers 2 years old and over which have not freshened. Dairy replacement heifers 1 to 2 years old totaled 4,560 thousand, a decrease of 5 percent from a year earlier. Estimated heifer calves kept for milk cow replacements totaled 5,021 thousand head, a decrease of 2 percent from January 1, 1963.

MANUFACTURED DAIRY PRODUCTS, 1963

United States production of Italian cheese, blue mold cheese, ice cream, ice milk, and creamed cottage cheese during 1963 were at record high levels, according to the Crop Reporting Board. American cheese, Mellorine, and nonfat dry milk production were the second largest of record.

Total cheese output in 1963 is estimated at 1,628 million pounds, up 3 percent from the previous year and the second largest production of record. Output of American cheese was 1,125 million pounds, 3 percent larger than a year earlier. Wisconsin produced 43 percent of all American cheese made in the United States. The 114 million pounds of Swiss cheese produced in 1963 were 4 percent greater than the 1962 production. Brick and Munster output was 49 million pounds, up 4 percent from a year earlier and the second largest production of record. Italian cheese production, at 176 million pounds, was 6 percent above the previous record high level established in 1962. This is the twelfth consecutive year that Italian cheese production has increased. Blue mold cheese output in 1963 was 17 million pounds, an increase of 16 percent from 1962, and a new record high annual level. Production of all other cheese totaled 31 million pounds, up 5 percent and the largest annual output since 1946. Creamed cottage cheese production was 787 million pounds, 1 percent above 1962 and the seventeenth consecutive year that output exceeded a year earlier and simultaneously set a new record high level of production. Cottage cheese curd production was 580 million pounds, down 2 percent from 1962.

Creamery butter output in 1963 is estimated at 1,401 million pounds, off 9 percent from 1962. Minnesota, with 25 percent of the Nation's total, continued as the leading butter producer. Limburger production, at 3.3 million pounds, decreased 9 percent and was the lowest production of record. Cream cheese production was 109 million pounds, 6 percent under the record high level of 1962. Neufchatel production totaled 3.4 million pounds, 33 percent under a year earlier.

The frozen dairy products industry established a new record high level of output in 1963. Ice cream production is estimated at 721 million gallons, up 3 percent from 1962 and a new record for this commodity. New York continued as the leading ice cream producing State. Output of ice milk totaled 194 million gallons, up 4 percent, a record high, and the nineteenth consecutive year that production exceeded a year earlier. Milk sherbet production was 42 million gallons, 4 percent above 1962, and the largest annual output since 1945. Mellorine production, at 51 million gallons, was 1 percent below the record level of 1962.

Evaporated whole milk production in 1963 declined for the eighth straight year. Output was 1,870 million pounds, 3 percent less than 1962 and the smallest annual volume since 1935. Canned sweetened condensed whole milk production has increased for five consecutive years. Production totaled 79 million pounds, 8 percent over a year earlier, and the largest annual production since 1949. Production of nonfat dry milk for human food, at 2,131 million pounds, decreased 4 percent from the record high 1962 level. Dry whole milk output totaled 78.7 million pounds, fractionally below 1962 and the smallest production since 1942. Production of dry buttermilk in 1963 was 87.3 million pounds, 1 percent above a year earlier and the second largest production of record.

1/ Revisions for 1962, by States and by months, for butter and byproducts and American cheese, were published by the Chicago Dairy office in the August 1963 issue "Milk Prices Paid by Creameries and Cheese Plants" released September 30, 1963. Data for 1963 are preliminary.

2/ Includes all types of natural cheese except American.

3/ Revisions for 1962 by States and by months, for evaporated milk, were published in the August 1963 issue of the "Evaporated, Condensed, and Dry Milk Report" released September 30, 1963. Data for 1963 are preliminary.

4/ Represents average prices received and average fat tests of all manufacturing grade milk sold by farmers. Current figures for this series are published each month in the "Agricultural Prices" Report.

FLUID MILK AND CREAM: PRICES, SALES, AND RECEIPTS 1963

Dealers' buying prices for fluid-use milk down 4 cents in 1963

Prices of milk used for fluid purposes during 1963 averaged \$5.31 per hundredweight, 4 cents lower than in 1962. Compared with a year earlier, prices were lower in each of the first 9 months of the year. Beginning in January, when the average was 8 cents below the previous year, the difference increased to 13 cents in March. The average was 3 cents per hundredweight under the same month in 1962 for July through September. Monthly average prices were about the same as in 1962 for October but higher for November and December. By regions, 1963 averages were lower in four, with decreases ranging from 4 cents per hundredweight on the Pacific Coast to 9 cents in the Middle Atlantic and East North Central. Increases, by regions, ranged from 1 cent per hundredweight in the Mountain States to 12 cents in the West South Central.

Home and store prices higher in 1963

The average price for the most common grade of whole milk delivered to homes in 25 cities during 1963 was 27.1 cents per single quart. This is two-tenths of a cent higher than the average for 1962. Prices quoted for this unit do not allow for discounts for quantity delivery. Annual averages were higher in 12 of the 25 markets. In nine markets, averages were about the same as in 1962, but were lower in four markets. Prices for the most common grade of milk sold out of stores in half-gallon containers in 25 cities averaged 45.8 cents during 1963 -- two-tenths of a cent more than in 1962. Higher averages than a year earlier were reported in 12 markets. Averages were about the same in four markets, but lower in nine.

Sales of whole and skim milk advance in 1963; cream items decline

Preliminary annual sales of whole milk in 81 marketing areas (7 State and 74 Federal) during 1963 were 2 percent higher than in 1962. In 80 of these areas, skim milk sales rose 9 percent from 1962. Sales of milk and cream mixtures (half and half) in 75 of these areas decreased 2 percent from 1962. In 76 areas, sales of other cream products totaled 2 percent under the previous year. The estimated milk equivalent of all fluid sales in 76 areas (excluding Boston, Springfield, Worcester, New Jersey, and the Federal areas in New York) was about $2\frac{1}{2}$ percent above 1962.

Upward trend in receipts continued in 1963

Receipts of milk from producers during 1963 in 86 marketing areas (6 State and 80 Federal) averaged 151.7 million pounds per day. This is 2 percent higher than in 1962. The average number of producers during the year was 184,000 -- 6 percent lower than in 1962. Receipts per producer averaged 826 pounds per day, 8 percent more than the previous year.

1/ Prices are the latest reported during the first 10 days of each month. Grades may differ by markets.

2/ In markets having a service charge on the first unit at each single delivery location, the charge has been divided between 2 quarts. Since the single quart concept used historically is based on every day delivery, it is assumed that under every-other-day delivery, the charge represents a two-quart purchase.

S. From State sources; FS- From Federal and State sources; all other from Federal sources. 1/ Quantities include receipts of milk from producers by handlers regulated in the respective marketing areas; data are revised for earliest data shown, preliminary for others. See below for markets combined. 2/ Federal totals less receipts from New Jersey or Mississippi producers where applicable. 3/ Data comprise plant receipts of Grade A milk from producers in the State. 4/ December 1963 data estimated for Philadelphia and Wilmington. Areas merged December 1, 1963.

Compiled from reports of Market Administrators and State milk control agencies.

MARKET COMBINATIONS IN SALES AND RECEIPTS TABLES

The following marketing areas have been combined in tables of this report: Northern Ohio - North Central, Northeastern, Toledo and Youngstown-Warren; other Ohio - Cincinnati, Columbus, and Dayton-Springfield; Indiana - Fort Wayne, Indianapolis and South Bend-LaPorte-Elkhart; Michigan - Southern and Upper Peninsula; Wisconsin - Milwaukee and Northeastern; Minnesota - Duluth-Superior and Minneapolis-St. Paul; Iowa - Cedar Rapids-Iowa City, Des Moines, North Central, Quad Cities-Dubuque and Sioux City; South Dakota - Black Hills and Sioux Falls-Mitchell; Kansas - Neosho Valley, Southwest and Wichita; Kentucky-Indiana - Paducah and Louisville-Lexington-Evansville; Tennessee - Chattanooga, Knoxville, Memphis and Nashville; Mississippi - Central, Delta, Gulf and Northeast; Louisiana - New Orleans and Northern; Texas - Austin-Waco, Corpus Christi, Central West, San Antonio and Panhandle; and Colorado - Colorado Springs-Pueblo, Eastern and Western.
